French Parad'ox **The benefits of red wine without the alcohol**

French Parad'ox is a major breakthrough for those who want the benefits of red wine but don't want to or can't tolerate alcohol. French Parad'ox is a special red wine marc extract in capsule form. Each capsule contains an amount of antioxidant polyphenols equivalent to the amount in two glasses of red wine - minus the alcohol.

French Parad'ox is more complete than other 'grape extract' products because it contains more than just a grape seed extract. It also contains extracts from the skin and leaves. Resveratrol, the most studied antioxidant of red wine, is found in grape skins, not in seeds. French Parad'ox is standardized to contain .02% resveratrol, plus 25% anthocyanosides, considered to be among the most potent antioxidants yet discovered. 100% vegetarian

GMO-Free PhytoSoya Soy phytoestrogens for hormonal balance*

With 35 mg isoflavones per capsule, PhytoSoya is a one-per-day soy supplement. Isoflavones are natural plant estrogens that may help ease symptoms of menopause and which may help maintain a healthy heart.

General recommendations for soy isoflavone intake are based on the typical Asian diet, which contains between 30 and 50 mg per day. PhytoSoya falls right into this recommended range with 35 mg per capsule. Each capsule contains approximately 5.5 mg genistein (-in), 18 mg daidzein (-in) and 11.5 mg glyciein (-in). 100% vegetarian.

Coleus (*Coleus forskohlii*)

Common name: Makandi

Parts used and where grown: This attractive, perennial member of the mint (Lamiaceae) family originated in the lower elevations of India. It is now grown around the world as an ornamental plant. The root is used medicinally.

Coleus has been used in connection with the following conditions (refer to the individual health concern for complete information):

Ranking	Health Concerns
Secondary	Asthma Glaucoma
Other	Cardiomyopathy Hypertension Obesity Psoriasis

Historical or traditional use (may or may not be supported by scientific studies): As recorded in ancient Sanskrit texts, **coleus** was used to treat heart and lung diseases, intestinal spasms, insomnia, and convulsions in Ayurvedic medicine.¹ These show striking similarities to the actions modern scientific studies have shown. However, there appears to be no pre-modern mention of the use of **coleus** for glaucoma.

Active constituents: Forskolin is a diterpene found in **coleus** that inhibits the enzyme adenylate cyclase.² Adenylate cyclase regulates formation of cAMP, a compound that in turn exerts control over numerous activities in every cell. Forskolin-induced elevation of cAMP levels in cells leads to blood vessel dilation,³ inhibition of mast cells (and hence reduction in allergic inflammation),⁴ increase in thyroid hormone secretion,⁵ and stimulation of fat release from fat cells.⁶ Forskolin has other properties as well, including inhibition of the pro-inflammatory substance known as platelet-activating factor (PAF)⁷ and inhibition of the spread of cancer cells.⁸ Research into **coleus**'s other constituents has been sparse.

Much of the research into the actions of forskolin has primarily been completed in an attempt to understand how cAMP is involved in various disease processes. As a result, there has been little human study of the medicinal properties of **coleus**. Studies in healthy humans, including at least one double-blind study, have repeatedly shown that direct application of forskolin to the eyes lowers pressure in them.⁹ ¹⁰ Elevated eye pressure can lead to glaucoma.

One non-randomized study on humans has shown that forskolin can reduce blood pressure and improve heart function in people with cardiomyopathy.¹¹ Forskolin was given by injection in this study; it is unknown if oral **coleus** extracts would have the same effect. A small double-blind study found that inhaled forskolin could decrease lung spasms in asthmatics compared to placebo.¹²

How much is usually taken? **Coleus** extracts standardized to 18% forskolin are available, and 50–100 mg can be taken two to three times per day. Fluid extract can be taken in the amount of 2–4 ml three times per day.¹³ Most studies have used injected forskolin, so it is unclear if oral ingestion of **coleus** extracts will provide similar benefits in the amounts recommended above. Until topical preparations of pure forskolin are available for people with glaucoma, an eye bath can be prepared using the fluid extract. Boiled water is mixed with 4–8 drops of the fluid extract and applied directly to the eyes.¹⁴ It is imperative to maintain sterile conditions so as not to cause eye infections during this procedure.

Are there any side effects or interactions? **Coleus** is generally free from side effects. It should be avoided in people with ulcers, because it may increase stomach acid levels. It could also theoretically cause a problem in someone with low blood pressure, though this has not been documented. Direct application to the eyes may cause transitory tearing, burning, and itching. The safety of **coleus** in pregnancy and lactation is unknown.

Certain medications may interact with **coleus**. Refer to the drug interactions summary for a list of those medications. It is recommended you discuss the use of **coleus** and your current medication(s) with your doctor or pharmacist.

Within *The Natural Pharmacy*, information about the effects of a particular supplement or herb on a particular condition has been qualified in terms of the methodology or source of supporting data (for example: clinical, double blind, meta-analysis, or traditional use). For the convenience of the reader, the information in the table listing the supplements for particular conditions is also categorized. The criteria for the categorizations are: "Primary" indicates there are reliable and relatively consistent scientific data showing a health benefit. "Secondary" indicates there are conflicting, insufficient, or only preliminary studies suggesting a health benefit or that the health benefit is minimal. "Other" indicates that an herb is primarily supported by traditional use or that the herb or supplement has little scientific support and/or minimal proven health benefit.

DermaLEAN™

What is DermaLEAN?
What are its benefits?
What are the benefits of transdermal application?
How does DermaLEAN compare to other weight-loss products?
Is this product legal?
Side effects?
Recommendations.

-ORDER NOW-

What is DermaLEAN?

DermaLEAN is the newest and most effective topical fat loss product available without a prescription. Most commonly found in European obesity clinics, DermaLEAN is used to break up fat pockets in cellulite specific areas of the body; hips, thighs, stomach buttocks, etc. Since it's recent awareness, the bodybuilding community is now generally using DermaLEAN for pre contest fat loss. It's applied very similarly to other pre-contest creams such as, Topical Triacana and the popular Thimucase. DermaLEAN is completely legal and sold as an OTC supplement in the U.S.

What are its benefits?

DermaLEAN will effectively and safely aid fat-loss to maintaining a healthy body-fat percentage. DermaLEAN contains ingredients to assist the break down body fat in troubled areas and ingredients to enhance well being riding stress related eating disorders, leading a happier healthier life.

What are the Ingredients?

Four Key Thermogenic Ingredients:

Aminophylline is a bronchiodilator commonly used in the treatment of asthma. It acts as a beta-2 adrenergic agonist, or activator of the beta-2 receptor in fat cells. Alpha and beta adrenergic receptors mediate very opposite effects on body fat, with beta-2 receptors being key triggers for lipolysis (fat loss). With this in mind aminophylline was investigated and shown to be highly successful as a topical fat loss crème in overweight women (1). This strategy was not novel however, as it was in fact already a well-tried practice to stimulate fat loss with the use of beta agonists such as ephedrine and clenbuterol, which are extremely popular with athletes and dieters due to their typically high level of positive response. Today there is little question that these types of substances can support the loss of body fat, and beta agonists in herbal form remain the most commonly used ingredients in OTC fat loss preparations.

Yohimbine is a potent alpha-2 adrenergic receptor antagonist, meaning that it works to block the activation of alpha adrenoceptors. As mentioned, alpha adrenoceptors have an opposite effect on the deposition of body fat compared to their beta counterparts. Alpha-2 receptors act to support fat storage, so blocking their activation can play a vital role in the stimulation of fat loss. The efficacy of yohimbine as a fat loss agent has clearly been demonstrated in a number of medical reports; including studies where it was given alone (2) or as a means to enhance lipolysis from concurrently administered beta agonists (3). Alpha-receptor antagonism is an important part of the fat loss puzzle, and may be too crucial to leave out of a well-planned diet program. For example, it is demonstrated that thigh fat is more difficult to mobilize than many other areas due to markedly higher concentrations of alpha-receptors in this region of the body (4).

Forskolin is the active ingredient in the *Coleus Forskohlii* root. *Forskohlii* is an herbal product originally used in India for medicinal purposes, and has only recently been discovered and utilized in the west as a fat loss agent. Forskolin plays a third and vital role in the stimulation of lipolysis; namely it increases cellular levels of cyclic AMP. Cyclic AMP is a messenger that mediates cellular activity, and it is well understood that cAMP can play a vital role in processes such as lipolysis. Forskolin is in fact well demonstrated to stimulate fat loss (5), and is crucial to DermaLEAN because it supports this process through a mechanism unique to the other two.

DMAE (2-dimethylaminoethanol) DMAE is a precursor to the brain chemical acetylcholine, which plays an important role in mood and well-being. It is also believed to be key in the CNS regulation of lipolysis and metabolism (6). Dieting is often believed to lower levels of acetylcholine in the brain, which in turn may work against the dieter by interfering with the normal regulation of metabolism and lipolysis, initiating a less positive outlook and agitating the need for feeding. Mental outlook is vital, as often it is the dieter's own inability to stick with a restricted caloric intake and exercise regimen that works against his or her progress. Although its effect is presumably not local, the addition of DMAE in DermaLEAN is still intended to support fat loss by helping to regulate normal brain control over tissue metabolism and lipolysis, as well as eliminate feelings of fatigue and disinterest in dieting. In essence, it works to bolster CNS functioning and the mental state of the user to strengthen the drive and likelihood of success during dieting.

What are the benefits of transdermal application?

Transdermal means transported through the skin. In other words, it's absorbed into the body through the skin. This is the most effective form of transport for this type of supplement. What makes it so effective? Because it's applied to the skin, DermaLEAN does not have to go through the digestion process that all oral supplements must go through. During digestion, oral supplements lose close to 95% of their active ingredients.

Another great benefit of transdermal application is its convenience. Oral supplements have a half-life of about 3 to 4 hours. This means that they need to be taken several times throughout the day to keep them consistently effective. With DermaLEAN, because it is a "time released" formula, one application per day (2ml) is sufficient to keep your metabolism at its optimum level throughout an entire 24-hour period. Not only is this more convenient, it is more efficient and easier on your body.

How does DermaLEAN compare to other weight-loss products?

DermaLEAN is quite possibly the most effective weight-loss product ever developed. Its proprietary compounds and transdermal delivery system have been administered by physicians for the treatment of cellulite and obesity for several years and has proven its effectiveness in the community. This combined with the fact that it's used only once daily makes DermaLEAN a superior and more convenient product.

Is this product legal?

Absolutely, we've had several communications with the FDA regarding the use of DermaLEAN and its ingredients. Under the DSHEA this product is completely legal.

Side effects?

Although uncommon, it is important to use only as directed and not to exceed 12 weeks of continuous use to help reduce the possibility of side effects occurring. Side effects associated with DermaLEAN are loss of appetite, tremors, dizziness, nervousness, restlessness, irregular heart beat, nausea, excessive sweating, diarrhea, and it is also possible to experience other complications due to the rapid weight loss or body-fat percentage loss that results from its use.

Recommendations.

To help utilize the effects of DermaLEAN, it is recommended that you apply it correctly, keep a healthy diet, and maintain a consistent workout regimen. Also stacking it with another weight-loss product like NitroPhen will help enhance its effects.

1. Apply it correctly: DermaLEAN works best when applied daily to area(s) in need of fat reduction. DermaLEAN is for topical use only and should not be injected or consumed.

2. Keep a healthy diet: Adjust your diet according to your personal goals. If you are trying to lose overall weight, keep a diet that is low in fat and useless calories. If you are trying to gain muscle and loose weight, keep a diet high in protein and complex carbohydrates. No matter what your goals are, to maintain your optimum metabolism, it is recommended that you drink a sufficient amount of water, get plenty of sleep (8 hours), and eat six small meals a day.

3. Maintain a consistent workout regimen: Being consistent in your strength training is a key element to producing quality muscle or losing weight. Make a schedule and stick to it. It's important to get plenty of rest and separate your strength from your aerobic training. This will help prevent over training.

DermaLEAN is not recommended for people under the age of 21. Do not use DermaLEAN if you have any pre-existing medical condition or if you are on any prescription medications unless a physician is consulted first.

ABSTRACTED-PUB-NO: US 5824702A

BASIC-ABSTRACT:

Inhibiting the harmful effect of UVR (ultraviolet radiation) exposure to the human skin comprises topical application of genistein (I) (i.e. 5,7-dihydroxy-3-(4-hydroxyphenyl)-4H-1-benzopyran-4-one).

USE - (I) is applied to the skin at a time close to the time of UVR exposure to inhibit UV-induced skin damage, especially photo-carcinogenesis or photo-ageing. (I) is applied in amount at least 0.1 $\mu\text{mol}/\text{cm}^2$.

ADVANTAGE - (I) is a topical chemopreventative agent obtained from natural sources (soy products) and having no observed adverse effects or toxicities in humans. It has high lipid solubility, easily penetrates the skin and has potent and stable antioxidant activity.
